

**Introduction**

This website for my Wife/Father in Laws business "Charleston Import Automotive". They had some issues attempting to get a new website up and their current website was created by my father in law.....13 years ago. The website needs a huge revamp and will take quite a few layers of coding languages, but first I will focus on the layout using bootstrap.

**Design and Implementation**

Design issues have been complicated since im attempting to recreate an existing website. I also need to keep in mind the actual functions of the business and what is best for the business. There is a lot of work that needs to be done outside of the coding realm, but this structure should help move the process along.

**Conclusion**

I'm somewhat happy with the fluid foundation that has been laid out for the website. I would like to slowly alter the CSS and continue to modernize it. Eventually The hard work of building databases for listing different parts, makes, and models.
